

I support my xm radio! If I'm paying for something I want everything that they can give me. The FCC should keep there noses out of this one. This is not something you can turn on without the equiment and the monthly service. I use the weather and traffic every day I drive for a living and xm is a god send for me. Some area's that I'm in I do not get anything at all it's that remote , and some days I'm in the city the next day. The weather and the traffic is a great help too me.
